Draft International Standard ISO/IEC DIS 10918-1, International Organization for Standardization/International Electrotechnical Commission, Information technology--digital compression and coding of continuous-tone still images--Part 1: Requirements and Guidelines, .COPYRG7. 1991.

ART-UNIT: 262

PRIMARY-EXAMINER: Hsia, Sherrie

ATTY-AGENT-FIRM: Morgan & Finnegan LLP

ABSTRACT:

The image pickup apparatus has a camera which encodes object image data, further comprises a recording unit 101 for recording image data, a connector 200 for connecting the camera with an expansion card 111 including a signal processor 701 for processing image data stored in the recording unit 101, and a memory and bus controller 102 for controlling image data, and the signal processor 701 controls so that program data transmitted from the camera 100 is written in a flash ROM 703 via an expansion bus interface 201.

Brief Summary Text - BSTX (4):

The digital electronic still camera records the image in the record medium in a data format which can be recognized by employing the character recognition software, (e.g., Tag Image File Format (TIFF), Joint Photographic Image Coding Expert Group (JPEG), thereby it is possible to input the image file based on the picked up image, which is stored in the digital record medium to a personal computer to recognize characters by executing a character recognition software, and output the result as text.
